GOAD + SevenNet-Omni vs DFT single-point energies

Adsorption energies from the published comparison table • 2 October 2026

Full range: every available pair is shown; x-axis ranges differ by panel

Filled: no SPE review flag in the source table. Hollow: source SPE review flag retained.

All finite pairs are retained; 74 entries lack an MLIP value. Flags are not a new validation of the calculations.

SPE uses the MLIP geometry with slab/molecule references; it is not the DFT-relaxed adsorption energy.
